# 1. Topic & Description

A Job Portal is an online platform that connects job seekers and employers.

It allows candidates to search and apply for jobs easily.

Employers can post job openings and manage applications.

The system reduces manual effort and saves time for both parties.

## 2. Problem Statement

Job search and recruitment is time-consuming when done manually.

Job seekers face difficulty finding relevant and genuine job openings.

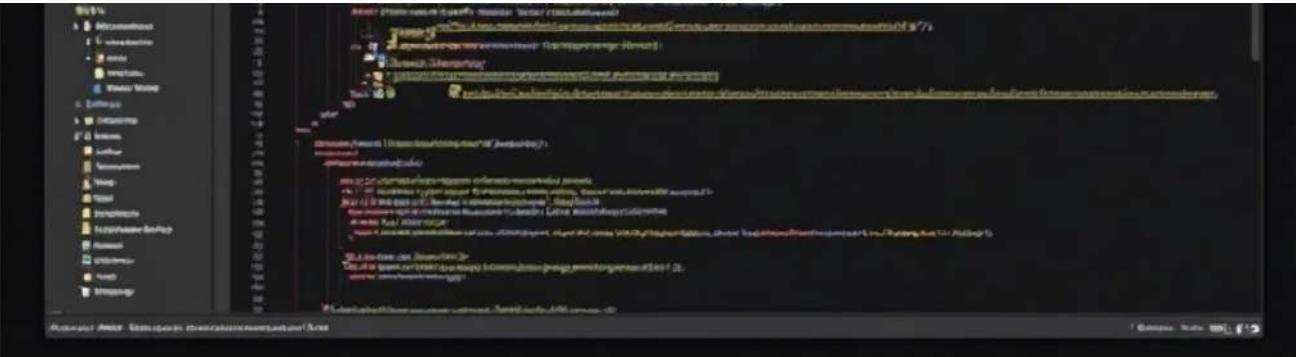

Employers struggle to shortlist suitable candidates efficiently.

Lack of a centralized platform causes data mismanagement and delays.

## 3. Scope

- Provides a centralized platform for job seekers and employers.
- Enables online job posting and job application.
- Helps candidates search jobs based on skills and location.
- Improves communication between recruiters and applicants.
- Reduces paperwork and increases hiring efficiency.

## 4. Technologies Used

### Frontend

HTML, CSS,  
JavaScript

### Backend

PHP / Python / Java  
(any one)

### Database

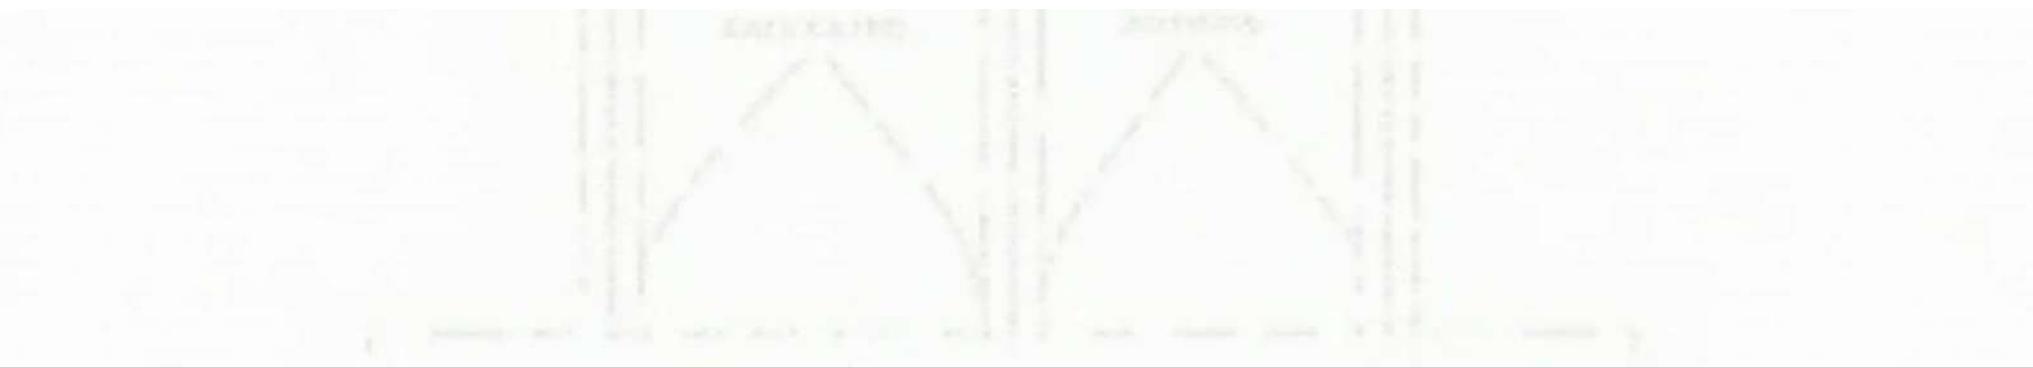

SQLite / JSON / File  
System (without  
MySQL)

### Tools

VS Code, Browser

### Platform

Web-based  
application

## 5. Prototype Diagram
